

SELECT Appli-Web Fiber Art TUTORIAL

1. On a sheet of Teflon or Parchment paper layer a piece of Appli-Web large enough for your project, then add threads/ribbons/fabric of your choice in a thin layer.

2. Apply another layer of Appli-Web on top of threads and add small pieces of fabric on top of this layer.

3. Cover layers with another sheet of Teflon or Parchment paper and press with iron using a medium temperature (no steam) with firm pressure; hold iron in place for several seconds until a bond is achieved.

4. After the piece has cooled, peel away from pressing sheets and cut out the shapes to apply to your project.
